

# SAFE, RELIABLE DRINKING WATER FOR ARIZONA FAMILIES

Drinking water systems available now at **NO COST** for your community

For years, Arizona communities have been without drinking water residents can trust. Contamination, lack of resources and the cost and complexity of traditional infrastructure have made this a difficult problem to solve, until now.

Through a government grant, we are bringing clean drinking water to Arizona communities now, at no cost.

## A Proven Technology Used by Communities Globally

A hydropanel is like a solar panel, but instead of creating energy, it produces clean, safe drinking water. This completely self-contained system can make about:

Three 24-packs of water bottles each week

Or up to 40 gallons of water each month

The Average Arizona family **saves up to \$840** a year on average\*

\*compared to bottled water purchase.

Drinking water made from sunlight and air

Delivers water directly to tap or faucet

Self-contained, elegant design

Cloud-connected for monitoring<sup>†</sup> and optimization

Hydropanels are currently installed in over 52 countries around the world solving many remote community water challenges.

For qualifying residents, two hydropanels will be provided at no cost that can dispense water directly or be plumbed to a faucet in the home.

To learn more about the program and see if residents in your community qualify, visit:
